

StarWatch

Integrated Security Management

The latest generation StarWatch system provides an integrated platform comprising:

- Access Control
- CCTV and DVR/NVR Management
- Photo ID Badge Production
- Security Management

StarWatch has been designed around the latest Microsoft operating systems and Relational Database Management Systems to ensure the widest possible compatibility with existing corporate IT infrastructure.

Existing StarWatch customers are catered for by way of a Legacy Device Interface (LDI) that enables the following equipment to be connected to StarWatch:-

- StarGate II / IAX
- StarGate I / IAC
- LEDA 8/3
- LEDAFlex
- Sabre II

Support for the current StarNET range is available via the LDI or directly using BACnet.

The system now features dynamic hot switch language support such that the database can be held in more than one language simultaneously and changed by the operator.

For business critical applications, a range of solutions are available which encompass both communications and database redundancy.

Card production is handled through an integral badge management system which features advanced card design options and a wide range of supported printers.

Comprehensive video management solutions allow PTZ control of CCTV cameras and replay of pre and post alarm video via the StarWatch alarm management application.

Integrated Security Management System

Features:

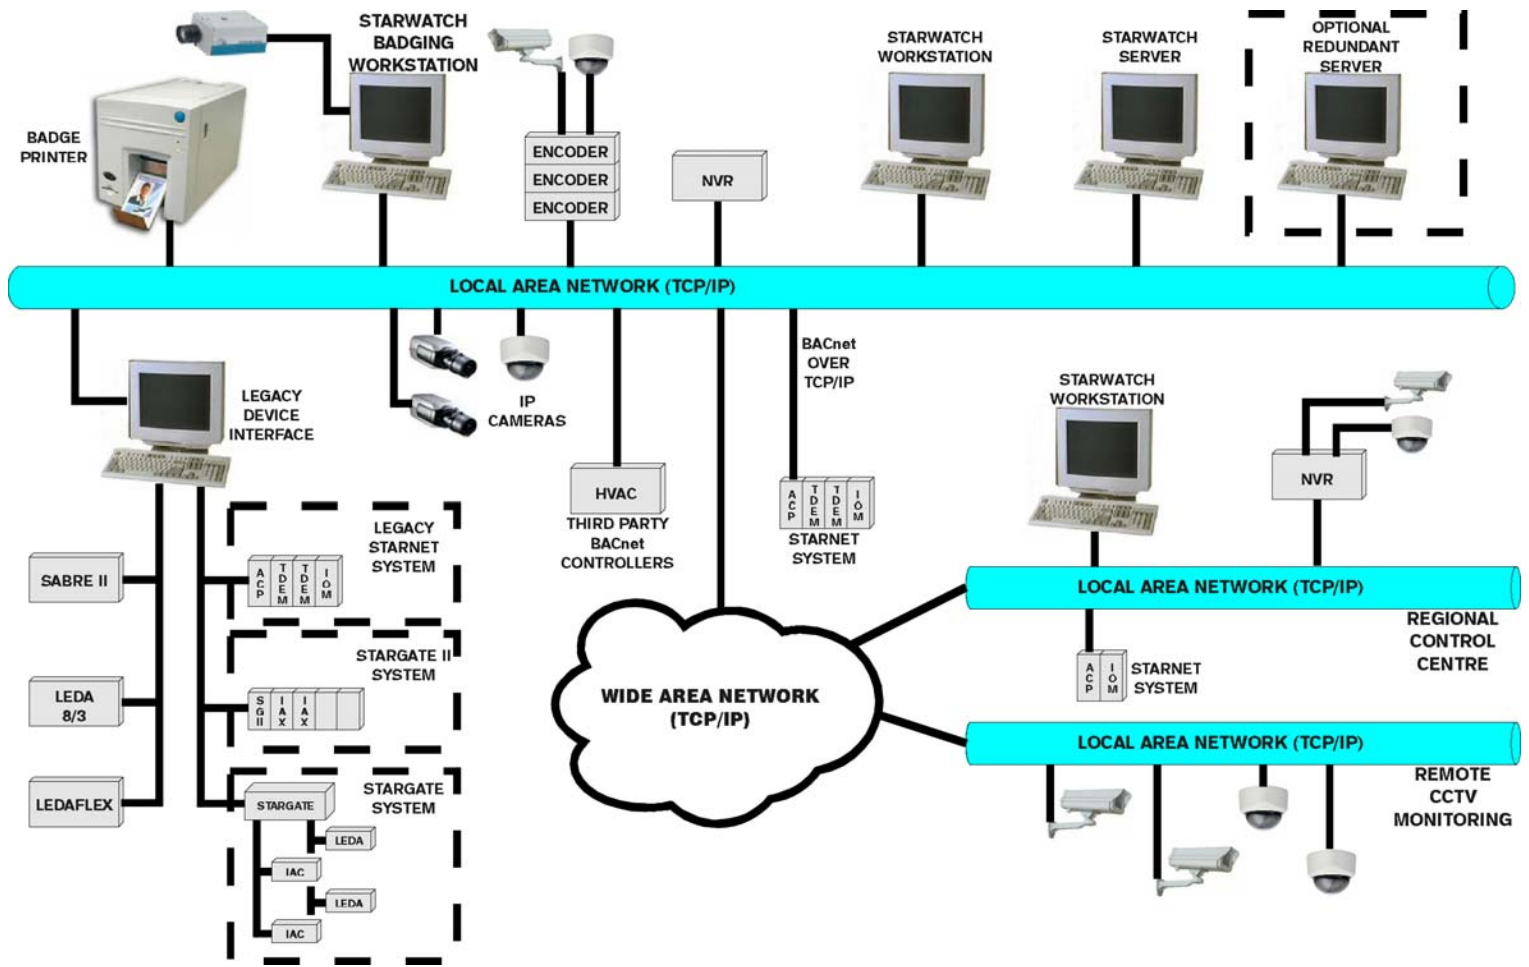

- Integrated security management system
- Windows Server 2003/XP/Vista compatible
- SQL Server 2005
- .NET platform, 64 bit application
- Advanced Docking Windows GUI
- Modular design

Benefits:

- Comprehensive security solution
- Compatible with leading business software
- Data exchange with third parties
- Future proof application
- Simple and intuitive to operate
- Cost effective expansion

StarWatch is modular by design incorporating systems ranging from single PCs to extensive, enterprise wide solutions using LAN/WAN infrastructure.

Typical System Architecture

Since its introduction in 1988, the StarWatch name has been synonymous with integrated security management solutions. Now in its third generation, these benefits are brought to you in a suite flexible enough to support single workstation environments with Microsoft SQL Server 2005 Express through to redundant, multi processor configurations using the latest 64 bit machines with SQL Server 2005 Enterprise Edition.

Modular software licensing allows the user to pay only for those features and facilities that are necessary. Upgrading is simplicity itself with a web based licensing system that allows you to upgrade your system whenever and wherever you choose.

StarWatch is designed as an open system. It uses the industry standard BACnet protocol to communicate with remote field hardware including the Remsdaq StarNET range. Future releases of StarWatch will feature OPC support for third party system integration.

As ever, backwards compatibility is catered for allowing three generations of Remsdaq remote hardware from StarGate I and II through to StarNET to be connected to This latest Master station offering. Sabre customers are also catered for with direct integration of the Sabre II processor.

To see how the latest StarWatch system can benefit your organisation, please contact Remsdaq or your local approved business partner at: www.remsdaq.com
